BAGLEY TEXAS HYBRID SEED CORN

Produced for Growers Who Want to Make the Most from their Corn Land, Labor and Time

INCREASE PRODUCTION 20% TO 35%

Texas Hybrid No. 8

Texas Hybrid No. 8

Makes about 25 to 35 per cent more corn per acre than native open-poll corn. It is a cross between two inbred strains and improved Certified Yellow sure-cropper. This corn is especially recommended for areas where a drought resistant corn is needed.

The Father Plant of Hybrid Corn

The tassel of the father plant ripens in the heat of the summer sun and expels literally millions of the pollen grains into the air. These dust-like particles fall below and are carried by the slightest breeze until they come in contact with and adhere to the silks on the immature cob thus fertilizing it and producing the kernel. Each pollen grain is capable of mating with a single cell and carries with it the characteristics of the parent plants to the future seed.

TEXAS HYBRID CORN

Many years of inbreeding work at the Texas Agricultural Experiment Station, by our own State's wonderful plant engineers, has made available for Texas growers several varieties of high-yielding Hybrid Corn especially adapted to Texas soils and seasons. Fortunately, indeed, are all Texas corn growers in being able to enjoy the fruits of these labors resulting in greater corn yields for all producers. Our necessary foundation seed come directly from the Station each year and after one year's work of cross-breeding we are in position to offer you our Bagley Texas Hybrid Seed Corn of highest quality and purity.

IT'S BETTER—Plant It and Get...

- Increased Yields of 20 to 35 Per Cent
- Better Quality Corn—More Nutritious Grain
- Grows Fast—Matures Early
- Heavy Uniform Ears
- Medium Height, Strong, Sturdy Stalks of Excellent Standing Quality
- Easy to Harvest
- Natural Resistance to Disease, Insect and Weather Damage
- Wonderful Root System Makes It Drought Resistant
- Developed and Bred in Texas
- Well adapted to Texas Soils and Climate

All of our Bagley Texas Hybrid Seed Corn is hand shucked, nubbled and shelled on an individual sheller preventing any mixture. It is then cleaned and screened as to grain size on a special cleaner machine, which insures for you a better and more uniform planting.

A large quantity of our Hybrid Corn has already been sold and we urge that you write us your requirements and let us get your order on file as early as possible. Be sure to plant some of this good Hybrid Corn the coming season.

Texas Hybrid No. 12

Grows increased yields of from 20 to 35 per cent and has extra high feeding value. Texas No. 12 is a Yellow Dent type corn being a combination of four inbred strains. It is a sure-cropper of golden breeding color. Particularly suited to land and climate adapted to growth of regular yellow dent corn. Needs slightly more rain than Hybrid No. 8 for extra high yields.

The Mother Plant of Hybrid Corn

The Mother plant plays the important role of actually producing the Hybrid Seed which are distributed to growers. Its tassel has been selected for its ability to produce the most pollen from the nearby father plants. Each individual silk leads directly to a kernel on the cob and the male pollen is in that way united with the female mates on the ear. If no union takes place between the male pollen and female sex cells, the kernels do not develop. On the other hand, timely and proper fertilization results in a full and complete row of grain on the ear of corn.

CORN HYBRIDS

are proving superior

In the leading corn producing states of the Northern Corn Belt from 75 to 95 per cent is now being planted in Hybrid Corn adapted to that region. This is factual proof that Hybrid Corn is producing more and making our northern neighbors more money per acre than open pollinated varieties.

In Texas, only about 1 per cent of our corn acreage is planted in Hybrid Corn, at present. When you consider that Texas Hybrid Corn will increase yields from 20 to 35 per cent every grower is actually losing considerable money by not planting it. Our own Texas Hybrid Corn has been developed in Texas, is being constantly improved in Texas and is especially adapted to Texas Soils and Seasons. Let's add millions in corn wealth to our State by using Texas Hybrid Seed Corn. It's good corn!

Satisfaction Guaranteed

Each bushel of Bagley Texas Hybrid Seed Corn is produced under the supervision of and in accordance with the rules and regulations of the State Seed and Plant Board of Texas. The necessary foundation stocks are supplied directly by Texas Experiment Stations. We guarantee every bushel to be satisfactory.

**MARTINDALE,
TEXAS**

Below you see a Mother Plant seed row on the Bagley Corn Breeding Farms. Note the uniformity of plants and wonderful ears of Hybrid Grain on these stalks. We use the 6 to 2 ratio, that is, six seed rows (mother plants) are planted to each two pollinator rows (father plants).

Reproduced above is a close-up snapshot of ears on the Mother plants of Bagley Hybrid Corn. The grain from ears such as these will be cleaned and graded and shipped to our customer friends. From these seed the grower gets the full benefit of inherent Hybrid vigor insuring greater production on each acre.

Below is a reproduction of our bushel bag. Don't be misled! Insist on Texas grown Bagley Hybrid Seed Corn. It's better!
